Case No. 3:17-mj-00049

UNDER SEAL

**AFFIDAVIT IN SUPPORT OF AN APPLICATION
FOR A WARRANT TO SEARCH AND SEIZE**

I, Christopher Hartley, being duly sworn, depose and state as follows:

INTRODUCTION

1. I am a Special Agent of the United States Department of Justice, Federal Bureau of Investigation ("FBI") and have been so employed since February 2016. I am assigned to the Washington Field Office, Northern Virginia Resident Agency, located in Manassas, Virginia. My principal duties include the investigation of, among other matters, civil rights violations of the United States.

2. I am a federal law enforcement officer under applicable provisions of the United States Code under Rule 41(a) of the Federal Rules of Criminal Procedure. I have received training in and have experience in the enforcement of the laws of the United States, including the preparation and presentation of search warrants, and in executing court-ordered search warrants.

3. I make this affidavit in support of an application by the United States of America for a warrant to search and seize evidence associated with Facebook account: **james.fields.9279**, Display name: **Conscious Ovies Aries**, as further described in Attachment A.

4. Based on the information below, I submit there is probable cause to believe the aforementioned Facebook accounts will contain evidence, as more fully identified in Attachment B, of violations of federal law, including, but not limited to, Title 18, United States Code, Section 249 (Hate Crime Acts).

5. Through training and experience, the Affiant has knowledge that domestic terrorists and persons affiliated with white supremacists group and/or conspirators will utilize cell phones, and other electronic devices, electronic mail ("E-mail"), and social media to conduct their illegal activity and maintain contact with other confederates, conspirators and criminal associates involved with the planning, targeting, and execution of their political or social goals to include, but not limited to, espousing violence.

6. The Affiant bases this affidavit upon personal knowledge and observations made during the course of this investigation, information conveyed to me by other law enforcement officers assigned to this investigation, and upon my personal review of records, documents, and items lawfully obtained by third parties. This affidavit is not intended to include each and every fact known to me or the other investigating agencies, nor does it reflect all the evidence developed during the course of the investigation. Instead, the Affiant has set forth sufficient information to establish probable cause for the issuance of the requested search warrant. Where the contents of documents and the actions, statements and conversations of others are reported herein, they are reported in substance and in part.

RELEVANT STATUTE

7. Title 18, United States Code, Section 249, provides that “Whoever, whether or not acting under color of law, willfully causes bodily injury to any person or, through the use of fire, a firearm, a dangerous weapon, or an explosive or incendiary device, attempts to cause bodily injury to any person, because of the actual or perceived race, color, religion, or national origin of any person” shall be guilty of a federal offense.

JURISDICTION

8. This Court has jurisdiction to issue the requested warrant because it is “a court of competent jurisdiction” as defined by 18 U.S.C. § 2711. 18 U.S.C. §§ 2703(a), (b)(1)(A) & (c)(1)(A). Specifically, the Court is “a district court of the United States . . . that – has jurisdiction over the offense being investigated.” 18 U.S.C. § 2711(3)(A)(i).

BACKGROUND

9. On August 12, 2017, a “Unite the Right” rally was held at Emancipation Park in Charlottesville, Virginia. The proclaimed purpose of the rally was to protest the removal of the Robert E. Lee and Thomas “Stonewall” Jackson statues in Charlottesville, Virginia. Several groups espousing right-wing nationalist and/or white supremacist views attended the rally in support.

10. In addition, several thousand counter-protestors attended the rally to oppose the rally and its supporters. Throughout the day, several instances of violence occurred between protestors and counter-protestors. At approximately noon, the rally was declared an unlawful assembly by the Charlottesville Police Department, and both protestors and counter-protestors dispersed to separate locations.

11. A group observed by law enforcement at the aforementioned rally was Vanguard America, whose beliefs are stated as:

"The chains of debt slavery wrap themselves tight around White Americans, such conditions must be reversed. A new generation of corporate leaders, who hold the interests of White America first and foremost, will naturally rise to the top of this new economy."

Below is a picture of the Vanguard America emblem taken from the website

<https://bloodandsoil.org/>:

The right-wing nationalist slogan "blood and soil" is derived from a German phrase, used by Adolph Hitler's Nazis, that purportedly promotes the notion that people with "white blood" are uniquely connected to "American soil."

PROBABLE CAUSE

12. The FBI is conducting an investigation into possible violations of federal criminal law committed by JAMES ALEX FIELDS ("FIELDS"), an individual allegedly associated with Vanguard America. The investigation was initiated following receipt of information FIELDS drove this vehicle, a grey Dodge Charger bearing Ohio license plate GVF1111, into a crowd of people during the "Unite the Right Rally" in Charlottesville, Virginia on August 12, 2017. The incident killed one Caucasian female and injured approximately twenty-eight (28) other individuals of African-American and Caucasian descent.

13. Based on Affiant's review of the video footage of the incident, FIELDS' vehicle travelled at a high rate of speed and intended to strike rally counter-protestors, including African-Americans. After striking multiple victims with his vehicle, FIELDS drove his vehicle backwards, in reverse, at high-rate of speed to flee the scene.

14. After his arrest by the Charlottesville Police Department, FIELDS was observed dressed in a white polo shirt, khaki pants, and black shoes. FIELDS' hair was trimmed with a "high and tight" or "side-fade" style consistent with the hair style of other individuals associated with the white supremacist group Vanguard America at the rally. Below is a picture of FIELDS that law enforcement officials obtained from social media at the Charlottesville "Unite the Right" rally. Fields is second person from the left with the large black shield in front of him.

15. The Affiant learned from law enforcement officials and review of video footage, one individual was in the vehicle at the time of the aforementioned incident. After the

Charlottesville Police arrested FIELDS, his vehicle was towed and stored in a secured law enforcement facility.

16. On August 12, 2017, the FBI interviewed SAMANTHA BLOOM ("BLOOM"), a woman identified as FIELDS' mother. BLOOM confirmed details about FIELDS and his trip to Charlottesville, Virginia for the "Unite the Right" rally. According to the BLOOM, she knew this information from a text message sent to her from FIELDS.

17. During the interview, BLOOM confirmed FIELDS' telephone number is 859-414-9660.

18. Through open source research the FBI confirmed **james.fields.9279**, Display name: **Conscious Ovies Aries** was a Facebook account associated with FIELDS.

19. Facebook owns and operates a free-access social networking website of the same name that can be accessed at <http://www.facebook.com>. Facebook allows its users to establish accounts with Facebook, and users can then use their accounts to share written news, photographs, videos, and other information with other Facebook users, and sometimes with the general public.

20. Facebook asks users to provide basic contact and personal identifying information to Facebook, either during the registration process or thereafter. This information may include the user's full name, birth date, gender, contact e-mail addresses, Facebook passwords, Facebook security questions and answers (for password retrieval), physical address (including city, state, and zip code), telephone numbers, screen names, websites, and other personal identifiers. Facebook also assigns a user identification number to each account.

21. Facebook users may join one or more groups or networks to connect and interact with other users who are members of the same group or network. Facebook assigns a group identification number to each group. A Facebook user can also connect directly with individual Facebook users by sending each user a "Friend Request." If the recipient of a "Friend Request" accepts the request, then the two users will become "Friends" for purposes of Facebook and can exchange communications or view information about each other. Each Facebook user's account includes a list of that user's "Friends" and a "News Feed," which highlights information about the user's "Friends," such as profile changes, upcoming events, and birthdays.

22. Facebook users can select different levels of privacy for the communications and information associated with their Facebook accounts. By adjusting these privacy settings, a Facebook user can make information available only to himself or herself, to particular Facebook

users, or to anyone with access to the Internet, including people who are not Facebook users. A Facebook user can also create “lists” of Facebook friends to facilitate the application of these privacy settings. Facebook accounts also include other account settings that users can adjust to control, for example, the types of notifications they receive from Facebook.

23. Facebook users can create profiles that include photographs, lists of personal interests, and other information. Facebook users can also post “status” updates about their whereabouts and actions, as well as links to videos, photographs, articles, and other items available elsewhere on the Internet. Facebook users can also post information about upcoming “events,” such as social occasions, by listing the event’s time, location, host, and guest list. In addition, Facebook users can “check in” to particular locations or add their geographic locations to their Facebook posts, thereby revealing their geographic locations at particular dates and times. A particular user’s profile page also includes a “Wall,” which is a space where the user and his or her “Friends” can post messages, attachments, and links that will typically be visible to anyone who can view the user’s profile.

24. Facebook allows users to upload photos and videos, which may include any metadata such as location that the user transmitted when s/he uploaded the photo or video. It also provides users the ability to “tag” (i.e., label) other Facebook users in a photo or video. When a user is tagged in a photo or video, he or she receives a notification of the tag and a link to see the photo or video. For Facebook’s purposes, the photos and videos associated with a user’s account will include all photos and videos uploaded by that user that have not been deleted, as well as all photos and videos uploaded by any user that have that user tagged in them.

25. Facebook users can exchange private messages on Facebook with other users. These messages, which are similar to e-mail messages, are sent to the recipient’s “Inbox” on

Facebook, which also stores copies of messages sent by the recipient, as well as other information. Facebook users can also post comments on the Facebook profiles of other users or on their own profiles; such comments are typically associated with a specific posting or item on the profile. In addition, Facebook has a Chat feature that allows users to send and receive instant messages through Facebook. These chat communications are stored in the chat history for the account. Facebook also has a Video Calling feature, and although Facebook does not record the calls themselves, it does keep records of the date of each call.

26. If a Facebook user does not want to interact with another user on Facebook, the first user can “block” the second user from seeing his or her account.

27. Facebook has a “like” feature that allows users to give positive feedback or connect to particular pages. Facebook users can “like” Facebook posts or updates, as well as webpages or content on third-party (*i.e.*, non-Facebook) websites. Facebook users can also become “fans” of particular Facebook pages.

28. Facebook has a search function that enables its users to search Facebook for keywords, usernames, or pages, among other things.

29. Each Facebook account has an activity log, which is a list of the user’s posts and other Facebook activities from the inception of the account to the present. The activity log includes stories and photos that the user has been tagged in, as well as connections made through the account,

such as “liking” a Facebook page or adding someone as a friend. The activity log is visible to the user but cannot be viewed by people who visit the user’s Facebook page.

30. Facebook Notes is a blogging feature available to Facebook users, and it enables users to write and post notes or personal web logs (“blogs”), or to import their blogs from other services, such as Xanga, LiveJournal, and Blogger.

31. The Facebook Gifts feature allows users to send virtual “gifts” to their friends that appear as icons on the recipient’s profile page. Gifts cost money to purchase, and a personalized message can be attached to each gift. Facebook users can also send each other “pokes,” which are free and simply result in a notification to the recipient that he or she has been “poked” by the sender.

32. Facebook also has a Marketplace feature, which allows users to post free classified ads. Users can post items for sale, housing, jobs, and other items on the Marketplace.

33. In addition to the applications described above, Facebook also provides its users with access to thousands of other applications (“apps”) on the Facebook platform. When a Facebook user accesses or uses one of these applications, an update about that the user’s access or use of that application may appear on the user’s profile page.

34. Some Facebook pages are affiliated with groups of users, rather than one individual user. Membership in the group is monitored and regulated by the administrator or head of the group, who can invite new members and reject or accept requests by users to enter. Facebook can identify all users who are currently registered to a particular group and can identify the administrator and/or creator of the group. Facebook uses the term “Group Contact Info” to describe the contact

information for the group's creator and/or administrator, as well as a PDF of the current status of the group profile page.

35. Facebook uses the term "Neoprint" to describe an expanded view of a given user profile. The "Neoprint" for a given user can include the following information from the user's profile: profile contact information; News Feed information; status updates; links to videos, photographs, articles, and other items; Notes; Wall postings; friend lists, including the friends' Facebook user identification numbers; groups and networks of which the user is a member, including the groups' Facebook group identification numbers; future and past event postings; rejected "Friend" requests; comments; gifts; pokes; tags; and information about the user's access and use of Facebook applications.

36. Facebook also retains Internet Protocol ("IP") logs for a given user ID or IP address. These logs may contain information about the actions taken by the user ID or IP address on Facebook, including information about the type of action, the date and time of the action, and the user ID and IP address associated with the action. For example, if a user views a Facebook profile, that user's IP log would reflect the fact that the user viewed the profile, and would show when and from what IP address the user did so.

37. Social networking providers like Facebook typically retain additional information about their users' accounts, such as information about the length of service (including start date), the types of service utilized, and the means and source of any payments associated with the service (including any credit card or bank account number). In some cases, Facebook users may communicate directly with Facebook about issues relating to their accounts, such as technical problems, billing inquiries, or complaints from other users. Social networking providers like Facebook typically retain records about such communications, including records of contacts

between the user and the provider's support services, as well as records of any actions taken by the provider or user as a result of the communications.

38. As explained herein, information stored in connection with a Facebook account may provide crucial evidence of the "who, what, why, when, where, and how" of the criminal conduct under investigation, thus enabling the United States to establish and prove each element or alternatively, to exclude the innocent from further suspicion. In my training and experience, a Facebook user's "Neoprint," IP log, stored electronic communications, and other data retained by Facebook, can indicate who has used or controlled the Facebook account. This "user attribution" evidence is analogous to the search for "indicia of occupancy" while executing a search warrant at a residence. For example, profile contact information, private messaging logs, status updates, and tagged photos (and the data associated with the foregoing, such as date and time) may be evidence of who used or controlled the Facebook account at a relevant time. Further, Facebook account activity can show how and when the account was accessed or used. For example, as described herein, Facebook logs the Internet Protocol (IP) addresses from which users access their accounts along with the time and date. By determining the physical location associated with the logged IP addresses, investigators can understand the chronological and geographic context of the account access and use relating to the crime under investigation. Such information allows investigators to understand the geographic and chronological context of Facebook access, use, and events relating to the crime under investigation.

39. Additionally, Facebook builds geo-location into some of its services. Geo-location allows, for example, users to "tag" their location in posts and Facebook "friends" to locate each other. This geographic and timeline information may tend to either inculcate or exculpate the Facebook account owner. Last, Facebook account activity may provide relevant insight into the

Facebook account owner's state of mind as it relates to the offense under investigation. For example, information on the Facebook account may indicate the owner's motive and intent to commit a crime (e.g., information indicating a plan to commit a crime), or consciousness of guilt (e.g., deleting account information in an effort to conceal evidence from law enforcement).

40. Therefore, the computers of Facebook are likely to contain all the material described above, including stored electronic communications and information concerning subscribers and their use of Facebook, such as account access information, transaction information, and other account information.

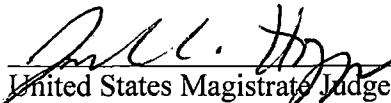

CONCLUSION

41. Based on the forgoing, I request that the Court issue the proposed search warrant. Because the warrant will be served on Facebook who will then compile the requested records at a time convenient to it, reasonable cause exists to permit the execution of the requested warrant at any time in the day or night.

Christopher J. Hatley
Special Agent
Federal Bureau of Investigation

Subscribed and sworn before me this 25th of August, 2017.

United States Magistrate Judge
